SUMMARY

Cybersecurity undergraduate at FIU Honors College (Minor: Artificial Intelligence) with two applications shipped and maintained on the Apple App Store and a freelance web development practice serving paying clients end-to-end. Builds security-first, production-grade software — from architecture and backend design through deployment and monitoring. Seeking a Summer 2027 Software Engineering internship.

EDUCATION

Florida International University — Honors College *In Progress*

B.S. Cybersecurity, Minor in Artificial Intelligence | GPA: 3.76 | Relevant Coursework: Discrete Mathematics (Graph Theory, Combinatorics, Predicate Logic), Java Programming

McFatter Technical College *Graduated*

CTE Degree in Applied Cybersecurity

CERTIFICATIONS & HONORS

- Studying for CompTIA Security+ (SY0-701) — Target Exam: December 2026
- CyberPatriot National Youth Cyber Defense Competition — Platinum Tier, Linux Team Lead (Ubuntu, Kali, Mint hardening & defense)
- Silver Knight Award Nominee — Vocational-Technical Category, Miami Herald

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Java, Swift, Rust

Frameworks & Runtime: Next.js, React Native / Expo, Node.js, Tauri 2.0

Backend & Infrastructure: Supabase (Postgres, RLS), Vercel, Stripe API, Resend, REST APIs, Webhooks

Security & Systems: Linux hardening (Ubuntu, Kali, Mint), Wireshark, Cisco Packet Tracer, OAuth / token-based auth, Tailscale

Tools: Xcode, App Store Connect, Git/GitHub, Cursor, CI/CD

PROJECTS

CyberSimply — Founder & Solo Developer 2025 – Present

- Architected and shipped an automated breaking-news pipeline for cybersecurity news — RSS ingestion → LLM classification (Claude) → Supabase-backed deduplication → rate-limited push delivery — live on the Apple App Store.
- Led a full UI redesign (card-based feed, trending carousel, category browsing) and hardened the production pipeline with provider-migration fixes, failure alerting, and automated health checks.
- Built with React Native, Expo, TypeScript, and Supabase.

AlarmQR — Founder & Solo Developer 2025 – Present

- Built a tamper-resistant alarm app requiring a physical QR scan to dismiss, using a native Swift bridge (VisionKit) for scanning and AlarmKit for scheduling.
- Shipped a re-engagement notification system (streak-risk, milestone, and win-back alerts) and a post-scan review-prompt flow; App Store analytics show 204% download growth and 15.8% install-to-scan conversion following launch.
- Built with React Native, Expo, Swift, and Supabase.

VoiceLocal — Founder & Solo Developer 2026

- Built a fully on-device macOS dictation app (zero cloud processing of audio or text) with a Tauri 2.0 + Rust backend and a native Swift sidecar for system-wide text injection.
- Designed a hallucination-detection guard combining content-novelty checks and sentiment filtering to suppress false transcriptions in real time; shipped with a companion Chrome extension and Stripe-based licensing.

MVella Studios — Founder, Freelance Web Development 2025 – Present

- Design and ship production Next.js/TypeScript web applications for small-business clients, owning full-stack architecture, payments, and deployment.
- Delivered e-commerce platforms including a streetwear storefront (Holy Beliefs) and a reservations platform for a tasting room (OOT Tastings), both with Stripe-driven checkout and transactional email via Resend.
- Manage client-facing infrastructure: custom domain email (Cloudflare + Resend SMTP), Google Ads search campaigns with conversion tracking, and recurring SEO/performance audits.

EXPERIENCE

Freelance PC Builder & IT Support / AI Automation Consultant Ongoing

- Build custom PCs end-to-end (component selection, assembly, OS install, performance tuning) and provide ongoing remote/hands-on IT support for clients.
- Teach clients to build and run AI automations and agentic coding workflows for their own business use cases.
